Summary

Analytical recent Computer Science graduate with a strong foundation in Machine Learning and Data Science. Skilled in the complete data lifecycle, from cleaning and EDA to building predictive models with Python and Scikit-learn. Possesses a unique advantage in developing interactive data visualizations and user-centric dashboards using React and TypeScript. Eager to secure a Junior Data Scientist or Data Analyst role to transform complex data into actionable insights.

Education

Raghu Engineering College, Computer Science

Dec 2021 – May 2025

- CGPA: 7.6/10
- **Coursework:** OOPs, Databases, Data Structures, Operating Systems, Computer Networks.

Skills

Programming Languages: Python, JavaScript, TypeScript, React

Data Science: pandas, NumPy, scikit-learn, Tableau, matplotlib, Statistical analysis and modeling

AI/ML Frameworks and Libraries: PyTorch, TensorFlow, Hugging Face Transformers, NLTK, OpenAI API

Databases: MySQL, Oracle, MongoDB

Operating Systems and Networking: Linux, Windows Server, Network protocols, Cybersecurity fundamentals

Development Tools and Methodologies: Git, GitHub, VS Code, Eclipse

Projects

Weed Identification (Live Demo)

github

- **Title:** Maize and Weed Detection Web App
- **Tech Stack:** React.js, Tailwind CSS, YOLOv8, FastAPI/Flask, Vercel
- **Description:** Built a web application that identifies maize and weeds in agricultural field images using a YOLOv8 model. Designed the interface with a dark, glass-style theme in React, allowing users to drag and drop images for analysis. The app shows detection results in real time with clear bounding boxes. The frontend is hosted on Vercel and communicates with a backend API for running the model.

Key Highlights:

- Designed a responsive black glass UI with drag-and-drop upload and instant image preview for a smooth user experience.
- Integrated the YOLOv8 object detection model to accurately identify maize and weed in images.
- Developed a backend API (FastAPI/Flask) to handle image processing and return detection results.
- Used React Hooks and Tailwind CSS to create clean, modular components that are easy to maintain.
- Deployed the frontend on Vercel and set up GitHub integration so updates are automatically deployed

Image Steganography (Live Demo)

github

- Developed a Next.js + TypeScript web app for image-based message hiding and retrieval.
- Implemented steganography using the Least Significant Bit (LSB) method for invisible data embedding.
- Technologies Used: Next.js, TypeScript, JavaScript, HTML5, CSS

Certificates

Introduction to Front-End Development – Meta

Oracle Cloud Infrastructure 2025 Certified Data Science Professional – Oracle
